Institute of Engineering and Technology, Sitapur road Lucknow 226021

Dr. A P J Abdul Kalam Technical University, Lucknow

SESSION 2025-2026

CERTIFICATE

This is to certify that **Vineet Kumar, Anurag Pandey , Mohammad Asgar, Jitendra Patel** , a student of the Computer
Science and Engineering branch, has successfully completed the mini-project titled **"STUDENT SURVIVAL SYSTEM"** during the **4th semester** of the B.Tech. program for the academic year **2025–26**.

The project was carried out under the guidance of **Mr. Abhishek Nagar**, during which the student demonstrated commendable diligence, dedication, and commitment.

This project was submitted in partial fulfillment of the requirements of the B.Tech. program and has been duly evaluated by the undersigned.

We extend our best wishes to the student for continued success in future endeavors.

Date: 21/04/2026

Signature of Supervisor
Mr. Abhishek Nagar
Ms. Kajal

Assistant Professor (CF)
CSED, IET LKO

Abstract

The **Student Survival System (SSS)** is a web-based platform designed to help students manage essential needs such as accommodation, food, medical support, and expenses. The current system focuses on the **PG/Room module**, where students can view nearby PG listings with details like price, distance, and facilities. Unlike existing platforms, SSS provides **verified, login-based reviews and a complaint system** where students can report issues and others can confirm them, increasing reliability.

The system also includes a **risk indicator** based on real-time student feedback and an **admin panel** for managing data and moderating content. Built using HTML, CSS, JavaScript (React), PHP, and MySQL, the system ensures accurate and trustworthy information. Future enhancements include food, medical, and expense tracking modules, making it a complete student support platform.

ACKNOWLEDGEMENT

Apart from my effort, the success of the project depends largely on the encouragement and guidelines of many others. We take this opportunity to express our gratitude to the people who express have been instrumental in the successful completion of this project.

We would like to express my deep and sincere gratitude to my supervisor **Mr. Abhishek Nagar** who gave me his full support and encouraged me to work in an innovative and challenging project for educational field. His wide knowledge and logical thinking gave me right direction all the time. We are deeply grateful my project coordinator for his help and support provided at every step of the project.

Last but not the least, we are thankful to all friends for their support and cooperation.

13. Conclusion

1.INTRODUCTION

The **Student Survival System (SSS)** is a web-based application developed to assist students in managing essential aspects of their daily life, especially when living away from home. Students often face difficulties in finding suitable accommodation, such as PGs (Paying Guests) or rented rooms, along with challenges in accessing reliable information about food, medical facilities, and daily expenses.

Existing platforms like search engines and listing websites provide basic information about PGs, but they often lack accuracy, real-time updates, and verification of user-generated content. As a result, students may rely on misleading reviews or outdated information, which can lead to inconvenience and poor decision-making.

To overcome these issues, the Student Survival System provides a **secure and reliable platform** where only authenticated students can access and contribute information. The system allows users to view PG listings with detailed information and enables them to submit reviews and report problems such as water issues, electricity failures, hygiene concerns, and safety risks. Other users can confirm these complaints, increasing the trustworthiness of the data.

Overall, the Student Survival System aims to create a **student-centered, real-time, and trustworthy platform** that improves transparency and supports better decision-making for students.

1.1 KEY FEATURES

- **PG/Room Listing**
  Displays nearby PGs with essential details such as price, distance from college, room type, contact information, and address.
- **Student Authentication System**
  Only registered and logged-in students can access the system, ensuring secure and verified participation.
- **Verified Review System**
  Students can provide feedback on PGs based on their experience, helping others make informed decisions.
- **Complaint Reporting System**
  Users can report real-time issues such as water shortage, electricity problems, hygiene concerns, and safety issues.
- **Complaint Confirmation Mechanism**
  Other students can confirm reported issues, increasing the reliability and accuracy of complaints.
- **Risk Indicator System**
  PGs are assigned a risk level based on complaints and confirmations, helping users identify problematic accommodations.
- **Admin Panel**
  Admin can add, update, or delete PG listings and moderate reviews and complaints to maintain system integrity.
- **Real-Time Data Updates**
  Information is continuously updated by users, ensuring the platform remains current and relevant.
- **User-Friendly Interface**
  Simple and interactive design for easy navigation and accessibility.

2. OBJECTIVES OF PROJECT

The primary objective of the Student Survival System (SSS) is to develop a reliable and student-focused platform that helps in managing essential daily needs, especially accommodation. The system is designed to improve the accuracy, transparency, and usefulness of information available to students.

The key objectives of the project are:

- To provide a centralized platform for students to find nearby PGs and rooms with detailed and structured information.
- To ensure data authenticity by allowing only registered and verified students to access and contribute information.
- To enable students to share real-time experiences through reviews and complaint reporting.
- To improve reliability through a complaint confirmation mechanism, where multiple users validate reported issues.
- To help students make better decisions using a risk indicator system based on real-time data.
- To provide an admin-controlled environment for managing data and maintaining system integrity.

3. EXISTING SYSTEM

At present, students mainly rely on general-purpose platforms such as search engines and listing websites to find accommodation and basic services. Common sources include **Google Maps**, classified advertisement platforms like **OLX**, and property listing websites such as **MagicBricks** and **99acres**. While these platforms provide basic information about PGs and rooms, they are not specifically designed for student needs.

These systems have several limitations:

- **Unverified Reviews:** Anyone can post reviews, which may be fake or misleading.
- **Outdated Information:** Data about PG availability, pricing, and facilities is often not updated in real time.
- **Lack of Student Focus:** These platforms are designed for general users and do not address specific student problems.
- **No Complaint Confirmation:** There is no mechanism to verify whether a reported issue is genuine or supported by others.
- **No Risk Analysis:** Users cannot easily identify whether a PG is safe or problematic.
- **Scattered Information:** Students have to search across multiple platforms, leading to confusion and inefficiency.

4. System Requirements

4.1 Hardware Requirements

Minimum Requirements (Client Machine / User Side):

- Processor : Intel Core i3 or equivalent
- RAM : 4 GB
- Storage : 20 GB free disk space
- Display : 1024 × 768 resolution or higher
- Network : Stable internet connection

Minimum Requirements (Server Machine / Hosting Side):

- Processor : Intel Core i5 or equivalent
- RAM : 8 GB
- Storage : 100 GB free disk space
- Network : High-speed internet connection with static IP / cloud hosting

4.2 Software Requirements Client

Side (End User)

- Operating System : Windows / Linux / macOS / Android
- Web Browser : Google Chrome / Mozilla Firefox / Microsoft Edge (latest version)

Server Side (Development & Hosting)

- Operating System : Windows / Linux
- Web Server : Apache Server
- Programming Language : PHP (Version 7.x or above recommended)
- Database : MySQL (Version 5.x or above)
- Server Package : XAMPP / WAMP / MAMP (for local development)
- Front-End Technologies :
    - HTML5
    - CSS3
    - JavaScript

5. Problem Statement

Students living away from home often face difficulties in finding reliable accommodation and accessing accurate information about essential services. Existing platforms provide basic listings of PGs and rooms, but the information is frequently outdated, incomplete, or unreliable due to the absence of proper verification mechanisms. Reviews on these platforms can be misleading, as there is no restriction on who can post them, and no system to confirm whether reported issues are genuine.

As a result, students may end up choosing accommodations with hidden problems such as poor hygiene, water shortages, electricity issues, or safety concerns. Additionally, there is no centralized system where students can share real-time experiences or validate the problems reported by others.

Therefore, there is a need for a secure and structured system that provides **verified, real-time, and student-driven information**, enabling students to make informed decisions and avoid unreliable or unsafe accommodations.

6. Proposed System

The **Student Survival System (SSS)** is a web-based platform designed to provide a reliable and student-focused solution for managing essential daily needs, with the current implementation focused on **PG/Room management**.

In this system, only **registered and authenticated students** can access and interact with the platform, ensuring that all data is contributed by genuine users. The system allows students to browse PG listings that include important details such as price, distance, facilities, contact information, and location.

A key feature of the proposed system is the **real-time review and complaint mechanism**. Students can share their experiences by posting reviews and reporting issues such as water shortage, electricity problems, hygiene concerns, and safety issues. Other students can then **confirm these complaints**, which increases the reliability and credibility of the information.

The system also includes a **risk indicator**, which evaluates PGs based on the number and severity of complaints and confirmations. This helps users quickly identify potentially problematic accommodations and make better decisions.

An **admin panel** is provided to manage PG listings, monitor user activity, remove fake or inappropriate content, and resolve reported issues, ensuring the system remains accurate and trustworthy.

7. Database Design

The **Student Survival System (SSS)** uses a relational database (MySQL) to store and manage data efficiently. The database is designed to maintain relationships between students, PG listings, reviews, and complaints while ensuring data consistency and integrity.

Main Tables and Structure

1. Users Table

Stores information about registered students.
id (Primary Key)
name
email (Unique)
password
created_at

2. PG_List Table

Stores details of PGs/rooms available near the college.
id (Primary Key)
name
price
distance
type (Room/PG)
address
phone
photo
facilities
rules

3.PG_Reviews Table

Stores reviews given by students for specific PGs.
id (Primary Key)
pg_id (Foreign Key → PG_List.id)
student_name
rating
review_text
created_at

4.PG_Complaints Table

Stores complaints reported by students.
id (Primary Key)
pg_id (Foreign Key → PG_List.id)
student_name
issue (water, power, hygiene, etc.)
message
confirms (number of confirmations)
severity (Low/Warning/Critical)
created_at

5.Complaint_Confirm Table

Stores confirmation records for complaints (to prevent duplicate confirmation by same user).
id (Primary Key)
complaint_id (Foreign Key → PG_Complaints.id)
student_name

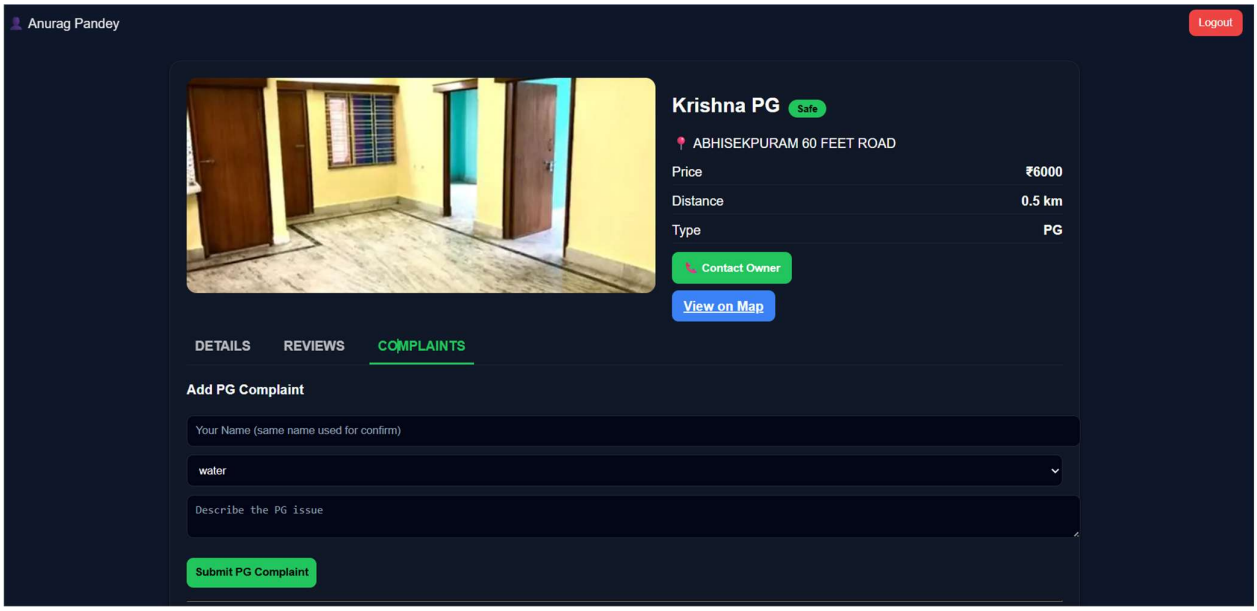
9.6 PG SECTION



10. ADVANTAGES

The **Student Survival System (SSS)** offers several advantages over existing platforms by focusing on reliability, real-time data, and student-centric features:

- **Verified Information:**
  Only registered students can access and contribute, reducing fake or misleading data.

- **Real-Time Updates:**
  Reviews and complaints are updated continuously, ensuring current and relevant information.

- **Improved Decision-Making:**
  The risk indicator helps students quickly identify safe and problematic PGs.

- **Complaint Confirmation System:**
  Issues are validated by multiple students, increasing trust and accuracy.

- **Centralized Platform:**
  All necessary information about PGs is available in one place, saving time and effort.

- **User-Friendly Interface:**
  Simple and interactive design makes the system easy to use for all students.

- **Admin Control:**
  Admin panel helps maintain data quality by managing listings and moderating content.

11 . FUTURE ENHANCEMENTS

The **Student Survival System (SSS)** is designed with a modular architecture, allowing it to be extended with additional features to make it a complete student support platform. The following enhancements can be implemented in the future:

- **Food Availability Module:**
  Provide information about nearby canteens, mess facilities, and affordable food options with student reviews and ratings.

- **Medical Support Module:**
  Include details of nearby hospitals, clinics, and pharmacies along with emergency contact features.

- **Expense Tracker:**
  Allow students to manage and track daily and monthly expenses with category-wise analysis.

- **Mobile Application:**
  Develop an Android/iOS version for better accessibility and real-time usage.

- **Advanced Analytics & Alerts:**
  Introduce smart alerts such as high-risk PG warnings and trending issues based on user activity.

- **Location-Based Services:**
  Integrate GPS-based features for better navigation and nearby recommendations. .

12 . LIMITATIONS

While the **Student Survival System (SSS)** provides a reliable and structured solution, it has certain limitations:

- **Dependence on User Participation:**
  The accuracy of data depends on active student involvement in posting reviews and complaints.

- **Initial Data Availability:**
  At the beginning, the system may have limited PG listings and user-generated content.

- **Internet Requirement:**
  The system requires a stable internet connection to function properly.

- **Possibility of Biased Reviews:**
  Although restricted to logged-in users, reviews may still be influenced by personal opinions.

- **Limited Module Implementation:**
  Currently, the system mainly focuses on the PG module, while other modules (food, medical, expense) are yet to be implemented.

- **Security Scope:**
  Basic authentication is implemented; advanced security features can be further improved.

- **Scalability Challenges:**
  With increased users and data, performance optimization may be required.

13. CONCLUSION

The **Student Survival System (SSS)** provides a practical and reliable solution to the common challenges faced by students in finding suitable accommodation and accessing trustworthy information. By introducing a **login-based system**, verified reviews, and a **real-time complaint and confirmation mechanism**, the platform ensures that the information available is accurate and dependable.

The implementation of a **risk indicator** further enhances decision-making by helping students identify problematic PGs quickly. Additionally, the **admin panel** maintains system integrity by managing data and removing misleading or false content.

Overall, the system successfully addresses the limitations of existing platforms by offering a **structured, transparent, and student-driven environment**. With its modular design, the project can be easily expanded in the future to include additional features such as food services, medical support, and expense tracking, making it a comprehensive student support platform.
